#### **DETAILED ACTION**

## **Election/Restrictions**

This application contains claims 4-5, 8, 22-43, 47-82 and 86-87 drawn to an invention nonelected with traverse. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 - 3, 6 - 7, 9 - 21, 44 - 46, 83 - 85 and 88 - 97 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (US 6,261,679).

Chen et al. teach the invention substantially as claimed. Chen et al. provide an absorbent composition comprising an superabsorbent material and a cooling compound. The absorbent composition exhibits the claimed absorbent capacity (col. 37, lines 50 – 61) and exhibits a cooling effect. The absorbent material and cooling compound may be acidic and basic, respectively, ultimately providing the claimed pH ranges or similar ranges which may be modified based on the general conditions being disclosed in the

Application/Control Number: 10/005,299

Art Unit: 3761

prior art (see below). The absorbent capacity is also taught and/or may be modified based on the general conditions being disclosed in the prior art (see below), as the endothermic effect. The method naturally flows from the structure as taught by Chen et al. and selling the invention of Chen et al. would be within the level of one of ordinary skill in the art since Chen et al. disclose that the structures of the invention are used for various purposes (col. 3, lines 1-17).

While a specific cooling effect may not be disclosed, it would have been obvious to one of ordinary skill modify the temperature reduction in order to determine the most effective product since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum value requires only a level of ordinary skill in the art.

#### Response to Arguments

Applicant's arguments filed February 28, 2007 have been fully considered but they are not persuasive.

With respect to the applicant's arguments that Chen does not disclose a cooling compound, the examiner disagrees. See col. 9, lines 18 – 32 and even col. 19, lines 8 – 18.

In col. 9, lines 18 – 32, Chen discloses the use of HCI. According to page 9 of the instant specification, HCI is one of the many salts used to produce an endothermic effect.

Art Unit: 3761

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michele Kidwell whose telephone number is 571-272-4935. The examiner can normally be reached on Monday thru Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tatyana Zalukaeva can be reached on 571-272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
